

Flexible Solutions, Unwavering Quality

LifeSafety Power is one of the top manufacturers of intelligent power management solutions. Their focus is to provide the most flexible, predictive and proactive power systems for access control, intrusion and surveillance in the industry.

Traditional Power systems provide a general power for access control and security applications without control panel mounting. FlexPower's mix-and-match system allows the creation of the exact power system for your needs.

Single, dual, and multi-voltage power systems in enclosures for simple requirements or for expansion with LSP accessory boards. Multiple enclosure sizes available.

Each FPO power supply provides one pair of outputs, user selectable for 12 or 24 VDC, the unit is configured in a painted, steel, locking enclosure with tamper switch and integral battery space. One output of a pair provides continuous output power for system use, the second is programmable for either fail-safe or fail-secure operation, activated when the fire alarm disconnect is initiated. Models with a B100 provide dual voltage output with a single AC connection.

FlexPower accessory boards can be added to a FlexPower system in ANY combination based on job requirements and system retains its complete agency listing.
